SDI

points

Points disposable brush applicators are used to quickly transfer small amounts of materials into difficult to reach areas. Points are resistant to common solvents in dental materials

Solvent resistant fibers

The fiber tips are resistant to harsh environments and solvents.

Non-absorbent, non-linting fibers

The fibers will not dislodge during the procedure. The solution is suspended in the fibers until applied.

Three sizes

The three sizes of Points, superfine, fine and medium, enable one to pick up different drop sizes.

Choice of colors

The various colors are ideal for color coding multistep procedures.

Soft flexible material

Points can be bent for maximum accessibility.

Indications

- Sealant application
- Placing bonding agents
- Applying etchants
- Placing cavity liners
- Styptic and disclosing solutions
- Mop up excess resin
- Condensing calcium hydroxide in root canals

instructions:

- 1 Points can be used either straight or bent

- 2 Dip the Point into the solution and place where required

- 3 Dispose of the Point after the application

Suggestion: When applying more than one solution, use a differently colored Point to avoid confusion
